

MOHIT TIWARI

SENIOR BACKEND DEVELOPER • CORE PHP & MySQL SPECIALIST

Agra, Uttar Pradesh, India | +91 9917563242 | mohit50055tiwari@gmail.com

PROFILE

Results-driven Senior Backend Developer with 2+ years of hands-on experience building scalable, high-performance server-side systems. Deep expertise in PHP, MySQL, and RESTful API architecture. Proven ability to design complex database schemas, lead integrations, and mentor junior developers toward delivery excellence.

TECHNICAL SKILLS

Backend

- PHP 7/8 (Core, OOP, MVC)
- Node.js
- REST API Design & Development
- Webhook Integrations
- Cron Job Automation

Database

- MySQL (Complex Queries, Joins)
- MongoDB
- Database Architecture Design
- Query Optimization & Indexing
- Stored Procedures & Triggers

Frontend (Collaboration)

- React.js
- HTML5 / CSS3
- JavaScript (ES6+)

Tools & DevOps

- Git & GitHub
- cPanel / Linux Server
- Postman (API Testing)
- XAMPP
- Deployment & Version Control

EDUCATION

Diploma in Information Technology (IT)

STRENGTHS

- Problem Solving & Debugging
- API Architecture Design
- Team Collaboration
- Code Review & Refactoring
- Continuous Learning
- Deadline-Driven Execution

WORK EXPERIENCE

Senior Backend Developer — Zanthium Technosoft Pvt. Ltd.

2022 – Present

- › Architect and develop scalable server-side applications using Core PHP with OOP and MVC design patterns, ensuring maintainable and extensible codebases.
- › Design and implement complex MySQL database schemas for high-traffic platforms handling thousands of concurrent users.
- › Build and maintain secure RESTful APIs consumed by web and mobile applications, following industry-standard authentication practices (JWT, token-based).
- › Lead integration of third-party payment gateways, wallet systems, automated reward engines, and notification modules.
- › Optimize critical SQL queries and database indexes, achieving significant improvements in response time and server load.
- › Collaborate closely with React.js frontend developers to design and deliver seamless end-to-end user experiences.
- › Manage codebase using Git and GitHub, implementing branching strategies and conducting thorough peer code reviews.
- › Deploy and maintain applications on Linux-based cPanel servers, handling configuration, monitoring, and troubleshooting.
- › Mentor junior developers on PHP best practices, API design standards, and database optimization techniques.

KEY PROJECTS

MLM & Reward Management Platform

- › Engineered automated multi-level reward distribution engine handling complex commission calculation logic across multiple user tiers.
- › Designed scalable relational database architecture capable of supporting large and growing user volumes without degradation.
- › Built admin dashboard APIs for real-time reporting, user management, and transaction monitoring.

Spin & Gaming Reward Module

- › Developed feature-rich spin wheel reward system with time-based cooldowns, daily limits, and configurable prize pools.
- › Implemented tamper-resistant reward validation and atomic transaction handling to prevent double-spending and fraud.
- › Integrated reward history tracking and analytics endpoints for business reporting.

Autopool Management System

- › Designed and implemented automated pool placement algorithms supporting dynamic matrix-based referral structures.
- › Developed re-entry logic, overflow handling, and reward distribution mechanisms ensuring fair and transparent operations.
- › Created admin-level pool monitoring and manual override APIs for operational flexibility.

Telegram Bot Integration

- › Built fully automated Telegram bot using PHP and the Telegram Bot API for real-time notifications, user actions, and support workflows.
- › Integrated bot with the core platform backend to push transactional alerts, reward confirmations, and admin broadcasts.

Payment Gateway & Wallet System

- › Integrated multiple payment gateways with secure callback handling, signature verification, and idempotent transaction processing.
- › Built internal wallet system supporting credits, debits, balance checks, and automated payout triggers.
